IML ex1:

Yair Shtern

ID: 318442241

prints for practical part:

```
Question (1)
(9.954743292509804, 0.9752096659781323)

Question (4)

Expectation:
[-0.02282878 -0.04313959 3.9932571 -0.02038981]

Covariance:
[[ 0.91667608  0.16634444 -0.03027563  0.46288271]
[ 0.16634444  1.9741828  -0.00587789  0.04557631]
[-0.03027563 -0.00587789  0.97960271 -0.02036686]
[ 0.46288271  0.04557631 -0.02036686  0.9725373 ]]

Question (6)
The values of (f1, f3) that gets the maximum log-likelihood is: (-0.05, 3.97)
```

Question (2):

Question (3):

(3) Histograms of PDF samples - It can be seen from the graph that the PDF $\sim\mathcal{N}\left(10,1\right)$ as expected

Question (5):

(5) Heatmap of the log_likelihood - It can be seen from the most likelihood is around f1 = 0 and f3 = 4 which make sense because the expectation is [0,0,4,0]
